SafeGuard Cloud Paywall

safeguard.media

The SafeGuard Cloud plugin protects web pages from AI bots and other web scrapers.

The SafeGuard Cloud service creates a secure tunnel between your website and the user's desktop in which nothing can be scraped in any way, and as the site owner, you have total control over who can access it, how and under which circumstances, with immediate effect on any changes made to your requirements.

This plugin enables you to nominate which of your pages uses SafeGuard Cloud by simply nominating a keyword that can be found in the url of the page/s that you want to protect.

SafeGuard Cloud Management

By logging into the SafeGuard Media website you have access to the many settings options and tools for:

- Online dashboard for page and access management.
- Limit access to Windows, Mac, iOS or Android phones.
- Settings can control user access per platform.
- Manage access for bots on a pay-per-view basis.
- Optional ACCESS RIGHTS using DRM tokens.
- Optional COPY PROTECTION from screenshots and recording.
- Optional white listing to exempt individuals from protection
- Optional WATERMARK using your own image.
- Mange access for bots by IP/network and user-agent.
- Manage periodic bot billing for pay-per-view.
- Set categories and tariff for bot usage.

DRM Management

- Assign DRM tokens with OS, expiry and device limitations.
- Allow access to users by device fingerprint or network.

Copy Protection

- Safe from all copy including screenshots and recording.
- No view-source, download or save options.

Getting Started

Download and install the **safeguard_cloud_paywall** plugin. Once installed, you can then try nominating a keyword that can be found in the url that you want to test. For testing, please be sure to use a unique keyword so that other pages will not be affected.

Mode	⦿ Active ◯ Disabled
URL Keyword Triggers (Separated by Commas e.g. lesson,course,download)	cloud, lesson
Enforce redirect	⦿ Enforce to all in the above list ◯ Enforce to all except in the above list
Redirect settings	⦿ Show preview and redirect protected view Allow non ArtisBrowser and bots but only show a preview. Adds a button to view full content. ◯ Protected view only Preview not allowed, automatically redirect.
Preview word limit	10
More info button text	More info

URL Keyword Triggers

If you nominate "cloud" as a keyword and then create a page named "safeguard-cloud-test", when you view that page you will see it displayed in protected format.

Show Preview

By enabling the *Show Preview* option, normal web browsers will be able to view the page, but they can only read the number of words that you nominate for the preview. Not that the limit is for <u>words</u> and not letters.

Platform Support

ArtisBrowser is available for Windows, Mac, Android and iOS (iPhone and iPad).

How It Works

SafeGuard Cloud encrypts web pages, making then inaccessible to bots, web scrapers and all web browsers except for the ArtisBrowser, which is a secure web browser especially designed for protecting intellectual property.

Total Control Management

By using SafeGuard Cloud you can take control over search engine and bot access and make them pay.

Evaluation

NOTE: that you will need to use the **ArtisBrowser** to view Safeguard Cloud web pages.

When you first try your test page, you may note that it is watermarked. That watermark only applies because you don't yet have a SafeGuard Cloud account.
